

OPERATION

Touch-Screen display for the ATM-Software control is easy to read thanks to smart phone technology and even easier to operate. Compact program sequences are easy to compile and therefore enable automated, password-secured program sequences. Update and back-up possible via USB.

CUT OPTIMIZATION

In addition to the type of cut, variable pulse-cut feed can also be selected. Rhythmic **pulsed feed** ensures regular cooling and removal of cutting debris from the sample.

REMOTE MAINTENANCE

Using your existing broadband Internet connection, ATM provides an online fault diagnosis and operator support.

BRILLANT 275

The universal wet cut-off machine BRILLANT 275 meets the highest of demands on space available and possibilities for cutting with its innovative concept for design, construction and operation.

The automatic horizontal table (X-axis) and cutting wheel movement (Y-axis) can reach up to 80 mm/sec. through highly dynamic axis drives in rapid-run.

Parallel setting of the wheel guard during vertical cutting sequences increases the cutting capacity considerably. The large front and hinged door with safety lock enable access to the machine table with longitudinal and cross T-slots. Recirculating cooling and automatic central lubrication systems are integrated into the robust aluminum construction body of the machine.

CONTROL

A wide range of cutting procedures is at your disposal for the very best cutting results. Through the combination of this **unlimited range of positions**, series cuts or differing cut sequences can be made into reality - all made possible by such a large variety of positions. The cutting process is rightly supported by **controlled cut-off wheel revolutions**. **Control of the cutting speed** and a **soft start control** serve additionally for an economical cutting feed. Manual control commands in the X-/Z-/Y-axes are also possible using an industrial joystick.

LASER ALIGNMENT AID

With line laser you can display the scheduled cut on the sample. This helps to define the exact cutting position.

MULTI-POSITION PROCESS MPP

With the "Multi-Position-Process" (MPP) you can place multiple specimens on the table and cut them in one sequence. The teach-in function enables a simple and user-friendly setting of various cutting positions.

TYPES OF CUT

Travel and cutting wheel offer a wide-ranging repertoire of types of cut through different combinations. In addition to the linear **diagonal cut**, the layer and segment-cuts are recommended for gentle cuts. The **layer-cut** is well-suited for cutting taller and longer objects as well as solid material. The **segment-cut** is especially suitable for large objects and hard materials.

BASIC MODULE

BRILLANT 275

**Order No.: M1832000**

- » automatic table (X-axis) and cutting wheel movement (Y-axis) can reach up to 80 mm/sec. through highly dynamic axis drive in rapid-run

- » equipment: automatic cross feed (Z-axis)

- » automatic touch detection

- » spacious cutting chamber with large T-slot table

- » machine table made of stainless steel with longitudinal and cross T-slots

- » parallel setting of wheel guard during vertical cutting sequences increases cutting capacity

- » Multi-position process MPP allows positioning of different components on the table simultaneously and adding into an automatic cutting process

- » economical cutting feed by control of the cutting speed and soft start control

- » variable speed

- » manual control of X-/Y-/Z-axis via an industrial joystick

- » Touch-Screen display and ATM-Software control

- » smart phone optics for easy compilation of compact program sequences with position steps and cutting modes (travel-, cut-off-, diagonal-, step- and segment cut)

- » an unlimited number of password-secured program sequences can be stored and updated; file exchange and backup via USB

- » ATM online-diagnostics and user support available

- » easy access to cutting chamber by large sliding and side door (with safety lock during wheel movement)

- » sliding door with large window made of scratchproof safety glass

- » options: laser alignment aid, centrifugal separator

- » incl. cutting wheel arbour with wear ring and optimum cutting chamber illumination

- » automatic central lubrication (6 bar compressed air required)

- » robust powder-coated aluminum construction body of machine

- » Easy-nut – for easy change of cutting wheel

- » e-Lab-ready
