The concept of our system lab furniture is founded on 4 corner stones:

QUALITY
Criteria for our furniture are based on the exacting requirements of industry and laboratories. The combination of high-quality materials and carefully thought-out construction guarantees stability and lasting quality.

FLEXIBILITY
The ATM-system provides a customized and flexible platform for personal workspaces, entire buildings, and everything in between.

FUNCTIONALITY
Archiving solutions and covered cable guides ensure a well-organized and efficient workplace.

DESIGN
Clean lines and high-quality materials create a fascinating, timeless and homogeneous style.

COMFORT AND FUNCTIONALITY

The Lab Furniture System combines tried & tested ATM quality with a fully thought-out and flexible modular system. Starting with the basic module in Aluminium, each single cabinet element can be fitted out with drawers, doors, inserts and upper structures.

Special care in the construction can be seen in the detail: All furniture elements are screwed together and installed on site. The concept uses every centimeter to ensure optimum storage and use of working space. This furniture system can be either installed as free-standing or put to use in almost infinite combinations. The cabinet module can be moved with a pallet truck and then closed off by a skirting panel at the desired location.

ACCESS FOR UTILITIES

Conduit for utilities access is discreetly hidden inside the whole cabinet combination. Pillars for the shelving & wall units provide possibilities for integrating a range of different utilities.

LAB PLANNING

3D-PLANNING SOFTWARE

View your new lab virtually!

The ATM 3D Lab is a powerful computer program that allows you to view drawings of custom built equipment and laboratory layouts in a realistic, three dimensional format.

We would like to get inspired by your vision and work out individual solutions in cooperation, perfectly fitting almost any floor plan and demand.

After compiling a list of all materials and automatically generating a price quotation you can experience a scaled impression of your new workplace.

The furniture is completely manufactured in our company and meets highest quality demands

– “Made in Germany” by ATM.

FRAMEWORK

Our framework elements are manufactured from powder-coated Aluminium. The neutral soft-grey is ideally suited for extraordinary decor. The removable skirting boards enable easy transport to other locations with a pallet truck.

WORK SURFACES

With our carefully selected range of colours for work surface materials together with a framework of soft-grey, almost all normal loading situations are ensured. HPL is to be recommended as standard for toughness and load-bearing capacity. For resistance against chemical attack, PP material (also available with beading) takes you a step further. The solid-ceramic surface with run-off channels finally concludes the highest of loading standards.

HANDLES

Chrome-plated cast metal handles have an anti-microbiological effect with their special powder-coating.

DECOR

Bright & elegant appears the combination of soft-grey Aluminium framework and highly-polished white HPL with its characteristic black edges for doors and drawers. Other decors are available upon request.

PORTS FOR UTILITIES

SOLID-CERAMIC

SOFT CLOSING

HANDLES

DISC STORAGE

BASIC MODULE

- Floor cabinets in 2 heights (800/900 mm)
- Concealed utility conduit

COMPARTMENTS

- Basic module 2 or 3-piece
- Doors single and drawers 1-2 compartments

DRAWERS AND DOORS

- Measurement unit 21 HT (800 mm)
- Measurement unit 24 HT (900 mm)
- Standard: highly-polished-HPL white with black edges
- Storage inserts such as disc storage or trash collector

WORK SURFACE

- HPL, PP or solid-ceramic, adapted to soft-grey

INSERTS

- Functional elements, such as recirculation cooling, safety cabinet, system cooler integrated into basic module
- Unit-related inserts for mounting, grinding, polishing and cleaning
- Built-in sink

SHELVES AND WALL UNITS

- Stable, free-standing pillar construction
- Utilities conduit integrated inside pillars, concealed conduit access
- Wall units with doors or swing-up flaps

SYSTEM DETAILS

HIGH PRESSURE LAMINATE (HPL)

Duroplastic HPL is produced by combining several layers of paper and resins under high pressure. Paper as a renewable raw material makes up about 60% of HPL. The top coating is made of robust and heat-resistant melamine.

In addition, it is especially shock- and wear-resistant. HPL has a higher durability than other conventional products. The surface is hygienically sealed and easy to clean.

SYSTEM BASIC MODULE

BASIC MODULE

Framework is available in 2-part or 3-part versions and in 2 different heights for working. Combined with the corner and end section solutions, it is possible to optimally adapt combinations into almost every space..

PANELS

Rear panels and utility ports at the side can be fitted with panelling, so that a closed appearance is presented. And if doors and drawers are to be fitted, then middle wall and front panel can be added to fit.

HT-PRINCIPLE
The ATM-developed HT modular system enables extraordinary design coupled with a pleasing appearance. Unevenness and unsightly alignment can be minimized through a combination of the different module heights.

Drawers and doors can be fitted in all combinations up to 21 HT (800 mm) i.e. 24 HT (900 mm). Fixtures in the working surface can be fitted with either 3 HT or 6 HT panels.

SYSTEM DOORS AND DRAWERS

LIGHT AND SOFT CLOSING HINGES

The latest hinge technology generation enables doors to be closed easily and softly.

The sturdy broad drawer (2-part) with its parallel slide rails is distortion-free and sturdy even if it is pulled out completely. Drawers use a self-closing system which closes softly & quietly and without slamming.

INSERTS

Inserts sit comfortably inside the drawers, are non-slip and can be freely positioned in the width. Stainless steel sinks are removable.

WASTE COLLECTION

2 removable waste collectors have capacities of 8 and 17 liters and are hidden from view.

SYSTEM SURFACES

OTHER SURFACES

For extreme operating conditions on surfaces such as working with chemicals, we recommend working surfaces made from PP-, composite-ceramic or solid-ceramic. These are not presented here and have to be produced according to demand for such elements.

SPACE ADAPTATION

An extension of the table top of up to 400 mm enables the closure of space between compartment end and wall. The front is completed with a panel or door.

END PROFILE

A practical closure to the back wall is provided by an Aluminium profile, whose inner edge is sealed in position with a silicon-plastic strip.

SYSTEM WORKING SURFACES

Illustr. position possibilities for undermount sink

Abb. position possibilities for ceramic sink with draining board

DROP-IN SINKS

The ceramic under-mount sink fits into one complete compartment. The ceramic drop-in sink needs 2 compartments. Both sinks need a height difference of 6 HT. It is a good idea to lay a protective mat in the base of the sink in order to protect the ceramic. When installing an under-mount sink into a fully ceramic worktop surface, run-off channels can be integrated into the ceramic.

SPECIAL SOLUTION

If the client so desires, a media interface from one of our office furniture sideboards to the lab furniture can be created, in order to carry the connecting cable invisibly to the ports.

MEDIA PILLARS

Underneath the storage area the fronts of the pillars can be used at both sides and are easily accessible for media ports such as for electricity and switches for illumination. Unused media columns are masked out with HPL as in the shelves level.

ILLUMINATION

Energy efficient LED lights under the upper structure generously illuminate the working area. The light switch is integrated into the media column.

ADAPTATION

If large pieces of equipment are to be positioned on the working surface, then the lower shelf can be optionally removed.

SYSTEM COMBINATIONS

FUNCTION ELEMENTS

The insertion mechanism of the wheeled re-circulatory cooling unit i.e. sedimentation container ensures ease of movement, even when the container is full.

MEDIA COVER

The cover behind the adapter attachment can be fitted with openings for the various media conduit systems.

USEFUL ACCESSORY

Vibration-sensitive measurement & testing equipment such as microscopes, hardness testing devices etc. demand special attention from their environment. The elastically cushioned hard stone plate minimises the effects of external vibrations and can be simply laid directly on top of the lab furniture.

Functional system for storing flammable liquids with air flow monitoring

- » outer body made of powder-coated Aluminium
- » inner frame corresponds to fire resistance class F90 acc. to DIN 4102
- » safety in case of fire: self-closing of drawers and doors via integrated thermal release
- » doors and drawers separately operable and lockable
- » doors lockable in any position (ca. 135° opening angle)
- » cabinet interior completely visible
- » insert trays PE or PP, increased protection against corrosion; removable for easy cleaning
- » ventilation per connection adapter (DN75) at the rear side of cabinet

SYSTEM-INTEGRATION SAFETY CABINETS

STORAGE OF CHEMICALS

System lab cabinets with air flow monitoring for storing acids, bases and dangerous chemicals have been specially designed for use in labs and naturally correspond to guidelines for safe and legally-binding storage regulations. This type of lab cabinet is especially suitable for the storage of flammable liquids.
